9 Insight Portal.....	24
9.1 Admin — Manage Applications	24
9.2 Admin — Content Bulk Upload.....	24

1 Introduction

This release delivers broad enhancements across the platform, with a strong focus on configurability, user experience, and operational reliability.

APEX has been strengthened through improved MCP server support, enhanced debugging, more robust workspace validation, and better DocuStore integration, while FLUX introduces important updates in cover management, multi-branding, privacy compliance, and dynamic UI capabilities. The UI Core further supports consistency and scalability through centralized authentication, standardized design assets, expanded token-based styling, and improved shared component behavior.

Across business solutions, the release brings meaningful usability and stability improvements. P&C Suite includes stronger export scalability and customer portal stabilization, while WorkerShield portals gain improved notes and document management with enhanced access control, filtering, and download capabilities. LifeCover OOB introduces richer beneficiary management, improved search and document experiences, localized branding, and employer self-service updates. In addition, the Insight Portal now offers stronger administrative governance and more efficient content onboarding.

2 Digital Component(s)

Release	Product
26.3.0	APEX 5 (API Process Execution Engine)
26.3.0	FLUX
26.3.0	UI Core, Customer and Agent Portal
26.3.0	DataBridge

Following Infrastructure components are recommended for digital products:

Component	Recommended Version
CloudOrchestrator	1.31.x or higher
VaultAuth	21.x.x or higher
DocuStore Atlas	V8.0.0
CloudSQL (Flexible Server)	14.9 or higher
SwiftCache	6.0
CloudVault Storage	Storage V2 Blob Storage

3 APEX

3.1 APEX MCP Server Support

Added support for APEX in API metadata updates within the API MCP server. This enables the inclusion of custom OpenAPI attributes, such as x-apex, and allows deployment scripts to retrieve the server URL from the /api-spec endpoint.

3.2 APEX Debugger Improvements

Added debugger improvements, including execution info section, step execution history and better indication of flow end in the middle of flow. This significantly improves debugging accuracy and helps developers better understand flow logic during execution.

Indication When a Flow Ends Mid-Execution

The debugger now clearly shows when flow execution stops before reaching the final step. This helps quickly identify incorrect conditions, step-level errors, and unexpected exits from the flow.

Step Execution History

A new step execution history view has been added, allowing users to see which steps were executed, in what order, and what data was passed between steps. This provides full execution context and makes it easier to analyze complex scenarios.

New "Execution Info" Section in the Debugger

The debugger now includes a dedicated Execution Info section showing input and output data for each step, execution duration, and additional diagnostic details. This helps developers quickly understand what happens at each stage of the flow.

Additional Debug Output for Network Steps

Previously, the debugger did not display full details from network steps. Now the following information is available: HTTP request, HTTP response, headers, and body (when allowed). This is visible when stepping through execution step-by-step, enabling precise analysis of API interactions.

3.3 Workspace Reference Check

APEX CLI now supports local workspace validation directly on Desktop. Developers can run `apex-cli validate` locally without relying on the deployment service.

APEX now includes enhanced validation for flow references within the workspace. The system automatically checks for broken flow references and missing flow references.

The workspace validator now performs comprehensive checks for error handler references and handler references. These improvements help developers detect misconfigurations early and maintain consistent error-handling logic across flows.

APEX now validates all schema references within the workspace to ensure structural consistency, identifying missing schemas and broken schema references.

3.4 Support Storing DocuStore ObjectID Using APEX DataStore Step

This feature introduces the ability to store and manage DocuStore ObjectID values directly within the database using APEX. Users can now seamlessly work with ObjectID values in their data models.

3.5 Security Fixes

Issue Key	Summary
NS-81936	CVE-2026-34601 (xmldom-0.8.10)
NS-81937	CVE-2026-40175, CVE-2025-62718 (axios-1.13.5)
NS-81940	CVE-2026-2950, CVE-2026-4800 (lodash-4.17.23)
NS-82610	CVE-2026-41242 (protobufjs-7.5.3)
NS-82613	CVE-2026-41238, CVE-2026-41239, CVE-2026-41240 (dompurify-3.3.2)
NS-82614	CVE-2026-41672, CVE-2026-41673, CVE-2026-41674 (xmldom-0.8.12)
NS-82669	CVE-2026-40895 (follow-redirects-1.15.11)
NS-83497	CVE-2026-41907, CVE-2026-41988 (uuid-10.0.0, uuid-8.3.2)
NS-83498	CVE-2026-6321, CVE-2026-6322 (fast-uri-3.1.0)
NS-83503	CVE-2026-42338 (ip-address-9.0.5)

4 FLUX

4.1 Cover Component Enhancement

Enhances the cover component by integrating it with the cover plan component to display selected plans per asset at runtime. It enables users to update plans and customize covers (optional/recommended) directly within the cover screen.

Ensures only applicable cover plans are shown per asset, aligned with core system rules and selection order, maintaining consistency between cover plan and cover components.

NovaSuite Search... JT Justin Time

Select Your Coverage

Available Covers	Life Protection — Configure
Life Protection Core cover · Mandatory \$120/mo	Sum Assured \$100,000 \$500,000 \$1,000,000
Critical Illness Optional cover \$45/mo	Policy Term 20 Years
Accidental Death Recommended \$22/mo	Payment Frequency Monthly
Disability Rider Optional add-on \$18/mo	Monthly Premium \$120.00
Total: \$120.00/mo	

Save Draft Continue →

4.2 Support Multi Branding

Enables Multi-Branding (Multi-Label Branding) capability in FLUX and Portal, allowing a single solution to support multiple brands within the same platform.

This feature improves flexibility by letting users configure and manage branding dynamically, reducing duplication of journeys and simplifying multi-brand deployments.

4.3 PII Enhancements

Enhances the TTL (Time-To-Live) management by introducing default configuration, GDPR-aligned retention handling, and improved reliability of the deletion process for PII data.

The feature adds monitoring and alerting for deletion job failures, along with health-check mechanisms to track cron job activity and ensure continuous data cleanup.

4.4 New Cover Component — Life

Introduces a new Life Cover component with enhanced UI capabilities, allowing users to select, configure, and manage covers with dynamic elements like sliders, dropdowns, and riders.

The component provides a dual-panel experience for selecting/unselecting covers, supports real-time updates (e.g., premium, term, consequences), and ensures a smooth, performance-optimized user experience.

4.5 Bugs and Change Request

Issue Key	Summary
NS-82641	FLUX stepper shrinks when show arrows option is enabled
NS-82374	Scroll to Top not working correctly after publishing journeys
NS-81539	Input field with input type "text" allows special characters
NS-81315	Client side dynamic table - Validation Not Triggered after hide/show
NS-81038	Go-to-Step using the stepper fails when navigating between screens
NS-80596	GDPR Enabled Forms Save & Exit Not Working as Expected
NS-80369	Dynamic table Sorting feature issues
NS-80269	FLUX issue - Unable to save the added data
NS-80129	Fix - Performance Discrepancy in FLUX - Draft vs Production Mode
NS-79851	Issue with Regex validation page rule
NS-79727	Repeatable page rules - unrequired fields on condition
NS-72503	FLUX HTML Auto-Formatting Breaks <div> Structure and Iteration Logic

5 UI Core

5.1 IAM Support (VaultAuth)

A fully centralized, VaultAuth-first PortalAuth implementation has been introduced to replace per-portal authentication logic. This update standardizes authentication behaviour across all portals.

A new unified PortalAuth handler is now provided through portal-sdk, allowing portals to simply export the centralized handler without implementing their own PortalAuth.ts logic. All authentication behaviour including providers, callbacks, refresh logic, redirects, and logout is now owned and enforced by the SDK.

5.2 Establish the Icon Pack Library

A centralized Icon Pack library has been created within the Foundation ComponentLab to standardize and streamline icon usage across all projects. This ensures visual consistency, simplifies maintenance, and provides a single source of truth for all icons.

New projects now automatically inherit the full OOTB icon set from the Icon Pack library. This removes the need for manual configuration and ensures that every new project starts with a complete, up-to-date icon collection.

5.3 Expanded Component Level Token Coverage

Component level design token coverage has been expanded in the Foundation ComponentLab. Styling is fully driven by the design token system.

5.4 Shared UI Component Enhancements

Shared UI components now deliver broader and more consistent responsive behaviour across all breakpoints. Layouts adapt more smoothly on mobile and tablet devices, resulting in a more stable and predictable user experience across screen sizes.

The Data Table component in Forms has been enhanced with new capabilities:

- Global filter — users can now filter data across all columns simultaneously
- Sorting support — columns can be sorted to help users navigate and analyse information more efficiently

6 P&C Suite

6.1 Agent Portal — Export Feature Enhancements

The export functionality has been enhanced to support larger datasets with improved scalability and system stability, leveraging optimized processing techniques such as batching, streaming, and asynchronous execution.

Configurable thresholds have been introduced across multiple file formats (XLSX, CSV, PDF, TXT) to ensure predictable performance and prevent system overload. Additionally, users are now provided with real-time visibility into export limits through dynamic messaging and guided prompts, enabling them to refine their data selection proactively.

The screenshot shows the NovaSuite Agent Portal interface. At the top, there's a search bar and a user profile for Justin Time. Below, there's a section for 'Open Claims' with a search bar and filters for 'Oct 25, 2024 - Aug 21, 2025', 'Indemnity', and 'Active +4'. An 'Export (620/500 Max)' button is visible. The main table lists claims with columns: Claim Number, Employer Name, Date of Injury, Total Incurred, Change Amount, Claim Type, Claim Status, and Nature of Injury.

Claim Number	Employer Name	Date of Injury	Total Incurred	Change Amount	Claim Type	Claim Status	Nature of Injury
CL-100000	Cameron Williamson	10/22/2023	\$75,989.00	\$10,000.00	Indemnity	COMPLETED	Arm Dislocation
CL-100001	Annette Black	10/22/2022	\$124,964.00	\$10,000.00	Indemnity	COMPLETED	Burn
CL-100002	Albert Flores	10/22/2021	\$110,998.00	\$10,000.00	Indemnity	COMPLETED	Black Lung
CL-100003	Eleanor Pena	10/22/2020	\$99,990.00	\$10,000.00	Medical Only	CANCELLED	Amputation
CL-100004	Darlene Robertson	10/22/2019	\$76,876.00	\$10,000.00	Indemnity	COMPLETED	Crushing
CL-100005	Courtney Henry	10/22/2018	\$105,889.00	\$10,000.00	Medical Only	COMPLETED	Amputation
CL-100006	Jacob Jones	10/22/2017	\$98,000.00	\$10,000.00	Medical Only	REJECTED	Arm Dislocation
CL-100007	Kristin Watson	10/22/2016	\$110,998.00	\$10,000.00	Indemnity	COMPLETED	Black Lung

When the export limit is reached, users are presented with an informative modal guiding them to refine their filters before proceeding.

6.2 Customer Portal Stabilization

Customer Portal Stabilization focuses on improving platform reliability, performance, and overall user experience by addressing critical issues across key functionalities. This release includes fixes and optimizations to ensure consistent system behaviour, enhanced data accuracy, and smoother user interactions.

7 WorkerShield

7.1 Employer and Worker Portal — Notes Tab

- Access to Notes is now controlled by role-based access control (RBAC). Only users with the appropriate role can view notes for policies, quotes, or claims.
- All notes include key details: Created date, Subject, and Category.
- Users can download single or multiple notes using the Select and download option.
- View notes in a read-only card format with rich text. Select a note to see Subject, date and time, author, and content.
- Subject filter to quickly find specific notes.
- Sort and filter notes by Created date and Category.

7.2 Employer and Worker Portal — Documents Tab

- Users see a "No results" message when no documents match the search, helping them refine their criteria.
- Users can download one or multiple documents based on their needs.
- Document access is controlled by RBAC security rules, ensuring only authorized users can view documents.
- Users can filter documents by Category to quickly find relevant files.
- Documents open in a read-only embedded PDF viewer with enhanced print and download options.
- If a document format cannot be viewed, users can download it and view it locally.

WORKPLACE INJURY REPORT

Claimant: Cameron Diaz

Claim #: PL-H98766

Date of Injury: Aug 08, 2023

Claim Type: Time Loss

This report documents the workplace injury incident involving the above-named claimant. All information has been collected in accordance with standard occupational health and safety protocols.

The incident occurred on August 8th, 2023, during routine operations. The nature of injury has been classified as Time Loss, and appropriate claim processing procedures have been initiated.

7.3 Provider Portal — Notes Tab

- Users can now access notes for a specific medical package based on the assigned role. Access is controlled by RBAC security rules to ensure only authorized users can view the notes.
- All notes include key details: Created date, Subject, and Category.
- Users can download single or multiple notes using the Select and download option.
- View notes in a read-only card format with rich text.
- Subject filter to quickly find specific notes.

- Sort and filter notes by Created date and Category.

The screenshot displays the NovaSuite interface for a specific medical package. At the top, there's a navigation bar with 'Overview', 'Task Management', 'Medical Packages' (selected), and 'Resource Center'. Below this, the 'Medical Package: MP-2024-001' is identified, associated with 'Dr. Sarah Miller | Orthopedics | Active'. The 'Notes' tab is active, showing a list of notes on the left and their details on the right. The notes include 'Treatment Plan Review' (03/10/2024 | Clinical), 'Follow-up Appointment' (03/12/2024 | Administrative), and 'Insurance Authorization' (03/15/2024 | Billing). The 'Treatment Plan Review' note is expanded, showing its subject and content: '03/10/2024 | 09:30 | Dr. Sarah Miller' and 'Patient reviewed for orthopedic treatment. Recommended physiotherapy sessions twice weekly for 6 weeks.' Another note from '03/11/2024 | 14:15 | Nurse Johnson' is also visible, stating 'Patient consent obtained. Treatment schedule communicated and confirmed with patient.'

7.4 Provider Portal — Documents Tab

- Users can access documents for a specific medical package based on their assigned role. Access is controlled by RBAC security rules, ensuring only authorized users can view the documents.
- Users see a "No results" message when no documents match the search.
- Users can download one or multiple documents.
- Users can filter documents by Category to quickly find relevant files.
- Documents open in a read-only embedded PDF viewer with enhanced print and download options.

8 LifeCover OOB (ROW & NA)

8.1 Agent Portal

8.1.1 Enhanced Beneficiary Component

The Beneficiary's tab has been enhanced with a two-panel layout — the left panel lists either the insureds or covers on a policy based on the need, and the right panel displays the associated beneficiaries for the selected item. The right panel view is fully configurable per project, supporting card, table, and hybrid display modes.

Agents can quickly navigate between insureds or covers and instantly see the relevant beneficiary breakdown — reducing clicks and improving efficiency on complex, high-volume policies.

The screenshot displays the NovaSuite Agent Portal interface. At the top, there's a dark blue header with the NovaSuite logo, a search bar, and a user profile for Justin Time. Below the header, a navigation bar shows tabs for Benefits, Beneficiaries (selected), Premium | Payment, Roles, Notes, Claims, and Documents. A 'Manage Beneficiaries' button is also present. The main content area is divided into two panels. The left panel, titled 'Insureds', lists four individuals: John Doe (Main Insured), Emily Doe (Co Insured), Sarah Doe (Co Insured), and Anna Doe (Co Insured). The right panel, titled 'Beneficiaries added according to law', contains a message stating that the selected insured has opted for beneficiaries to be added according to the law, and a button to 'Add Manually'. Above the insureds list, there's an 'Overview' section for the 'Life Package Policy' (PL-H98766) held by Chris Bacon, with start and end dates of Oct 22, 2023. It also includes 'Download Policy' and 'Edit Policy' buttons.

- Anna Doe**
Relationship: Child · DOB: 20 Nov 2015
20% Secondary

8.1.2 Global Search Enhancements

The Global Search experience has been enhanced with three key improvements:

- Keyboard trigger — Agents can now initiate search using the Enter key, reducing reliance on mouse clicks and speeding up navigation.
- "View All" in search layover — When results exceed a configured threshold, a "View All" option appears in the search dropdown, redirecting agents to the full list page with search context preserved.
- Pre-filtered All List page — On the All List page, results arrive pre-filtered with the search term and category pre-selected. The table supports pagination, sorting, export, and filtering.

[View All Results \(12\) →](#)

The screenshot shows the 'All Lists' section of the NovaSuite interface. At the top, there's a search bar and a user profile for 'Justin Time'. Below the navigation tabs, a dropdown menu is set to 'Pending Applications', and an 'Export' button is visible. A message states: 'Here is a detailed table of all applications in progress under your care. [Link](#)'. Below this, a search bar shows '111' results. The main table lists applications with columns for Application Number, Product Name, Application Start Date, Application End Date, and Status.

Application Number	Product Name	Application Start Date	Application End Date	Status
1112	Life Protection (SmartPack)	Jan 01, 2023	Jul 10, 2075	Pending
1115	Life Protection (SmartPack)	Jan 01, 2023	Jul 10, 2075	Pending

8.1.3 Generic Service Request

Agents can now raise a Generic Service Request through a guided, structured journey — covering service type selection, entity linking, document upload, and review before submission. This replaces ad hoc, inconsistent request logging with a single compliant workflow that reduces errors and speeds up case turnaround time.

The screenshot shows the 'New Service Request' workflow in NovaSuite. It features a progress bar with four steps: Service Type (completed), Entity Linking (current step), Document Upload, and Review. The 'Step 2: Link Related Entities' form includes fields for Policy Number (PL-H98766), Customer Name (Chris Bacon), Request Priority (Normal), and Assigned Team (Operations). Navigation buttons for 'Back' and 'Continue' are at the bottom right.

8.1.4 Sales Code Configuration

Agents can now view their assigned sales codes under Profile → Personal Information. The new table displays Sales Code, Ownership Type, and Owner Name, with pagination support for 260+ records.

8.1.5 Document Component Enhancements

The Document Component has been overhauled with two key improvements. Document Component V1 and V2 have been merged into a single unified component. Alongside this, the component now supports configurable tabs (e.g. My Forms, Service Requests), allowing users to navigate document categories through a structured tabbed interface with an upload form option. Both enhancements are available across agent and customer portals.

NovaCyberCompany
Bengaluru 560001, India

Dear: NovaCyberCompany
Insured: NovaCyberCompany
Policy number: NS-SMC0001065949/00

Please find enclosed your policy documents following the recent inception; we trust you will find these in order.

8.1.6 Locale-Based Portal Branding (Dynamic Logo Rendering)

The portal now supports locale-aware logo rendering — the logo displayed in the Header, Footer, and Profile sections automatically updates based on the user's selected language, instantly and without a page refresh.

Logos are managed centrally through ContentHub CMS, meaning business teams can update branding per locale without any code changes. A default logo is shown as fallback when a locale-specific asset is unavailable — ensuring a consistent experience across all language configurations.

8.2 Customer Portal

8.2.1 Enhanced Beneficiary Component

The Beneficiaries tab now features a two-panel layout — the left panel shows the customer's insureds or covers, and the right panel displays the associated beneficiaries for the selected item. The right panel view is configurable per project, supporting card, table, and hybrid display modes — ensuring the experience fits the portal's design and the customer's needs.

8.3 Employer Portal

8.3.1 Dashboard: Update Company Profile

Employers can now view and update their company profile directly from the portal. Via a simple popup, employers can edit contact details and address information, while core fields like Company Name and Registration Number remain read-only to protect data integrity. Changes are validated on save with a success confirmation displayed.

8.4 Bug Fixes

Issue Key	Summary
NS-82952	UI issues in marketing banner component

NS-82951	UI issues in All list page

NS-81025	UI issues in All list's explain CTA link
NS-81015	My Business Portfolio - Illustrations - Kebab Menu & Quick View
NS-80883	Responsiveness issues in All list table component
NS-80389	Responsiveness issues in Customer Portal

9 Insight Portal

9.1 Admin — Manage Applications

The Manage Applications feature introduces a centralized admin capability within the Insight Portal to view and manage all available applications from a single interface. It enables administrators to control application activation, identify beta releases, and configure user group-based access.

This enhancement improves governance, supports controlled rollout of applications, and simplifies access management across the portal.

9.2 Admin — Content Bulk Upload

The Bulk Upload capability in Content Management enables administrators to upload multiple content items simultaneously using a predefined Excel template. It streamlines large-scale onboarding of reports and dashboards while ensuring consistent data entry.

The system provides validation feedback for errors, improving accuracy and reducing manual effort. This enhancement significantly increases administrative efficiency and scalability within the portal.

NOVASUITE · DIGITAL INSURANCE PLATFORM

NovaSuite

POWERING MODERN INSURANCE

NovaSuite delivers best-in-class digital platform capabilities for insurance carriers worldwide. Our integrated, end-to-end platform equips insurers with configurable, last-inch functionality — enabling hyper-relevant experiences and better outcomes at scale.
